

RC Simplified™ Beta

Is a simple tool for everyone in the organization that will help analyze and easily document daily problems. RC Simplified™ Beta delivers an effective problem-solving tool into the hands of every user. There is no training needed to use this application and it is free to everyone.

Usability

RC Simplified™ Beta provides a text entry interface and simply asks the same questions a facilitator would ask. As you answer the questions a Realitychart is automatically created and opportunities for identifying solutions begin to jump off the screen.

Availability and Limitations

It is free to everyone, but is limited to 4 causes high, 5 causes deep and a maximum of 32 causes. Currently RC Simplified™ Beta does not allow for printing or exporting.

Transferability

It provides unique benefits to the individual and is a great starting point for the more involved and complicated problems analyzed using RealityCharting®. Each user can easily document their problems and then email them to a trained facilitator, supervisor, manager, etc. for further analysis and consideration. RC Simplified™ Beta will not open files created in RealityCharting® (.arca type) though any files created in this application (.rcs type) can be opened in the full version of RealityCharting®.

Principle Based

Users realize immediate results with a better understanding of cause and effect relationships and the corresponding improvement in the effectiveness of chosen solutions.

Practical Use

It's been said that there are more folks struggling with the simple root cause analysis issues than there are for the major issues like an engine failure.

Many companies are required for one reason or another to document all non-conformities and provide a record of what was done to investigate and resolve the applicable issue. This can become a problem when dealing with minor non-conformities like forgetting to cross the "T" or dot the "i". This is why many companies are pushed to the ubiquitous "5 Why's" approach, it's easy and can be done by one person, not a team.

With RC Simplified™ Beta you get these benefits and more with an actual cause-and-effect understanding of the problem backed by the power of a principle based process.

Installation Requirements

RC Simplified™ Beta can be installed in a Windows®, Mac®, or Linux operating system. Adobe® AIR® is required to run RealityCharting® and RC Simplified™ Beta.
